

Analysis

This file contains the result of a few sample large pictures. I did not use any other machine to check how the file transfer from the server to the client, except the virginia. I did every thing on the amazon server based on the virginia platform. Once I increase the size of the file that is going to be sent, the time it takes to the destination increases as well. Alought the time is so short, it is probably they are in the same location. Below is the speed vs size of file chart that can indicate how much time it increases when the size of the file increases.
